

Sloped Feedrails and V-Trainers

Training Tools for Future Headlock Use

SLOPED FEED RAIL

Before introducing your animals to headlocks, we believe it's important to teach them how to put their head in at shoulder height and then drop it down to eat.

POWERFUL TRAINING TOOL

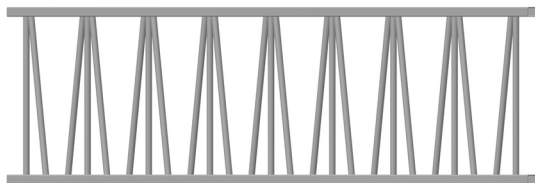

By using v-trainers or sloped feed rails as a training tool before transitioning to headlocks, you ensure a smooth transition and fewer refusals.

EASY INSTALLATION

Our easy-to-use mounting hardware ensures that installation is a breeze. There are a variety of sizes available for both v-trainers and sloped feed rails

ADJUSTABILITY

Our adjustable sloped feed rail systems give you the ability to adjust the bars to accommodate different age groups.

V-TRAINER
